Re: In the Matter of Dodds Ditch Water Users, and the Measuring Device Notice

To: Robert Leake

We have received the measuring device notice, and this letter is to inform you that the users of the Dodds Ditch plan on taking action to replace the existing measuring device with a new Parshall flume including a staff gauge. This was recommended in your original letter. I have personally met with Andrew in the local State Engineers office, and discussed how this process is to be accomplished. We also plan on including Lyle Taylor, who did not receive your original letter according to page four. We believe he would be most helpful in helping with correct measurements to build the new flume, as well as his knowledge of the best access points. We will begin the building and installation process as soon as the ditch runs dry, to allow access of the flume to be replaced.

If you have any other questions, please feel free to contact me at 435-789-4226.

Thank You,

Gala Morris
